

Protect workers from cleanup hazards

US flooding and hurricane activity over the past several years has been at an all time high, causing disruption to businesses, employees, and residents in impacted regions. International Enviroguard has supported disaster recovery efforts for over 30 years by quickly supplying teams with effective PPE when they need it most.

The Seen and Unseen Hazards of Disaster Relief and Recovery

The aftermath of a hurricane typically includes property damage such as flood damage and structural damage. Sharp objects, contaminated floodwater (category 3 blackwater), water-borne pathogens, industrial chemicals, blood, and blood-borne pathogens are all a concern to those helping with cleanup efforts. It's often recommended that those involved in cleanup or rescue efforts wear appropriate disposable suits to protect against potential hazardous agents. It's also recommended that used PPE is disposed of properly to reduce the risk of spreading contaminants to uncontaminated areas or individuals.

Mold is also a concern after water damage. Mold thrives in moist conditions and can grow on nearly any building material. Mold spores can be inhaled or absorbed through skin contact, possibly causing allergic reactions. Mold continues to grow in flood damaged buildings, unless properly remediated. Proper PPE is vital in a comprehensive mold remediation project.

Find your Floodwater and Hurricane PPE:

		GENERAL CLEANUP	MOLD REMEDIATION	WASTE TREATMENT & DISPOSAL	ENVIRONMENTAL REMEDIATION	CHEMICAL HANDLING	HAZARDOUS REMEDIATION	EMERGENCY RESPONSE	BLOOD & BLOOD-BORNE PATHOGENS	CATEGORY 3 BLACKWATER
SMS		An ideal solution for general cleanup. Breathable and provides an excellent particulate barrier and protection from light splashes and spray.								
ValuGuard™		An economical solution for protection from liquid splashes, sprays, and particulates.								
MicroGuard MP®		A heavier duty solution for protection from liquid splashes, sprays, and particulates.								
Body Filter 95+®		Our best level of breathable particulate protection. Provides a breathable barrier from particulates with a holdout down to 0.3 microns in the 95% to 99% range- similar to an N95 respirator!								
Chemsplash® 1		Offers impervious splash protection against light-duty chemicals, acids, and hazardous particles. Available in both serged and taped seams.								
Chemsplash® 2		The best solution for protection from aggressive chemicals, acids, and caustics. Taped seams.								
ViroGuard®		Wide range of clean up applications. Passes ASTM 1670 (blood) and ASTM 1671 (blood-borne pathogens) testing.								
ViroGuard® 2		Taped seam suit where both the fabric and seams pass ASTM 1670 (blood) and ASTM 1671 (blood-borne pathogens) testing. Broad spectrum of cleanup applications.
